

Homework

Q1) The geography of England helped in bringing Industrial Revolution? Discuss.

(150 words)

Talking about 'Industrial Revolution' first, we can say that the same was the mixed combination of 3M's i.e. Men, Machines, methods, material & money. Where, men is meant to be Industrial worker having capitalist as his/her head with middle management; machine & methods as equipments with recent available technology; material as raw material & money as capital. These mixed combination ~~lead~~ lead to increase in PPC i.e. Production, Planning & Control in order to accomplish the targets effectively & efficiently. If we talk about first country where I.R. took place was as above mentioned in the question i.e. England.

England, being the first country, leading the world to the next level had great advantage to its 'Geographical Location'.

As we can see above in the map, that England is an island having large coasts of various types around, which helped in 'maritime activities'. As it had vast reservoirs of 'coal & iron' having great importance in Industrial Revolution with the present feasibility of maritime activities. Further, creating Route for transportation of essential elements of SM's i.e. material through the Navigation process with the help of 'Waterways & Road Ways'. With the large coasts around, leading to the way for 'Rivers & Canals' developments which were used as 'Waterways'. With the infrastructure, further developments special purpose 'Roads' were preferred named as 'Macadamized Roads'. Ongoing developments & presence of large coasts around gave an idea for ^{of Enclosure movement} Agricultural Developments with easily available Agricultural Infrastructure in 17th & 18th Century. In early 19th Century, those introduced 'Railways' which further accelerated the transportation.

Therefore, due to 'aloofness' from the main land of Europe, England was free from political views; conflicts & disputes. With such a most important factor i.e. 'Geographical Location' & other related 'non-hindrances' creation ~~factor~~ lead England to be first successful country giving birth to Industrial Revolution.

Abbreviation: I.R* - Industrial Revolution
